FujiNet–ChannelF Rev0: the Videocart edge at 1:1, seen from the CONTACT side (B.Cu), edge toward you
Print at 100 % (no fit–to–page) and check the 50 mm ruler. Then lay a real Videocart board on it, contacts up and edge toward you: the 22 contacts (2.54 mm, two groups of 11), the key slot between pins 11 and 12, the 68.3 mm tab and the 5.6 mm holes on the shell bosses should line up within ~0.3 mm. Pin 1 (GND) is at the RIGHT seen from this side; pins 19–20 are the console +5 V, 22 the +12 V (unused).

50 mm: measure this before trusting the print
