FujiNet–StudioII Rev0: the cartridge edge at 1:1, seen from the CONTACT side (B.Cu), edge toward you. Print at 100 % (no fit-to-page) and check the 50 mm ruler. Then lay a real Studio II cart board on it, contacts up and edge toward you: the 22 contacts (0.156" / 3.96 mm), the 90.9 mm width, the two 8.13 mm post holes and the side notches should line up within ~0.3 mm (FliP multicart v5.1 geometry). Pin 1 (D7) is at the LEFT seen from this side; 15 is the console +5 V, 6 and 7 are grounded, 22 CART CS.

50 mm: measure this before trusting the print
